

Aurality Empress 3D Scanner: Redefining Ear Fitment Precision

Introducing the **Aurality Empress 3D Scanner**, the ultimate solution for audiologists and hearing aid dispensers seeking to deliver unparalleled comfort and fit for their patients. This state-of-the-art device is designed to scan both the pinna and the ear canal, ensuring precise fitment for a wide range of custom devices, including hearing aids, in-ear monitors, hearing protection, and swim plugs.

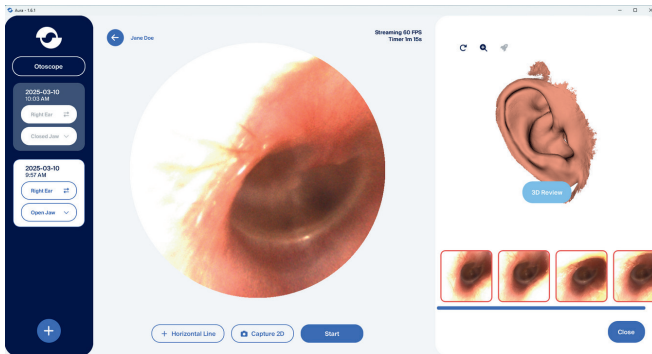

Key Features:

- ✓ **Patented Scanning Technology:** The Aurality Empress 3D utilizes innovative patented technology that allows for a comprehensive scan of the ear's anatomy. This cutting-edge system captures every contour and detail, resulting in a flawless digital representation.
- ✓ **Single-Step Process:** Say goodbye to complicated procedures! The Empress 3D operates through a simple, one-step scanning process that minimizes discomfort and makes the fitting experience seamless for both practitioners and patients.
- ✓ **High-Quality 3D Files:** Once the scan is complete, the device generates an accurate 3D file of the ear impression. This file can be easily sent electronically to earmold manufacturers, streamlining the production of custom devices.
- ✓ **Reduced Turnaround Time:** With the ability to send digital impressions directly to manufacturers, the Aurality Empress 3D significantly reduces turnaround time for custom devices. This means your patients can enjoy the benefits of their personalized fittings sooner than ever.
- ✓ **Digital Record Keeping:** The Empress 3D also allows your practice to maintain a digital copy of each ear impression. This feature not only enhances patient records but also facilitates future adjustments or replacements without the need for an additional scan.

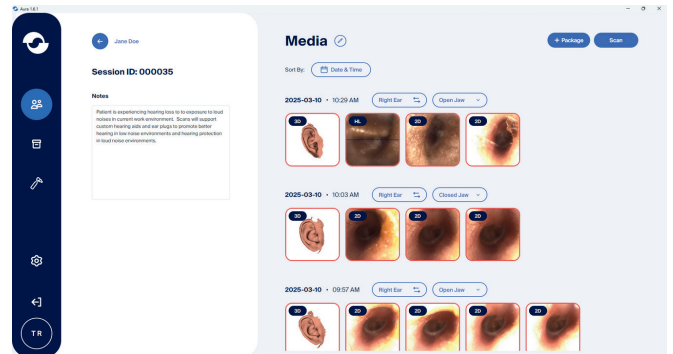

Providing your patients with a superior fitting experience
